Contents

About the authors	xix
Foreword to the first edition.....	xxi
Foreword to the second edition.....	xxiii
Preface to the first edition	xxv
Preface to the second edition	xxvii
CHAPTER 1 Introduction	1
CHAPTER 2 Transportation Systems	5
2.1 Background.....	5
2.2 History of Transportation.....	6
2.3 Transportation Sector and Transportation Modes	15
2.3.1 Components of Transportation Modes.....	16
2.3.2 Structure of Transportation Modes	17
2.3.3 Technologies of Transport Modes	17
2.3.4 Relationships Between Transport Modes	20
2.4 Characteristics of Transport Modes and Their Systems.....	22
2.4.1 Introduction	22
2.4.2 Urban and Sub/Urban Road and Rail-Based Transit Systems for Passengers.....	22
2.4.3 Urban and Sub/Urban Transport Systems for Freight Shipments.....	29
2.4.4 Interurban Road Transport Systems.....	30
2.4.5 Interurban Rail Transport Systems	34
2.4.6 Inland Waterways and Sea Shipping Systems for Cargo Shipments.....	44
2.4.7 Air Transport System	51
2.5 Transportation Systems Topics: Planning, Control, Congestion, Safety, and Environment Protection.....	56
2.6 Problems	59
References	59
Websites.....	62
CHAPTER 3 Traffic and Transportation Analysis Techniques	63
3.1 Object Motion and Time-Space Diagrams	63
3.2 Transportation Networks Basics	69
3.3 Optimal Paths in Transportation Networks	72
3.3.1 Finding Shortest Path in a Transportation Network.....	72
3.3.2 Dijkstra's Algorithm.....	73
3.3.3 Shortest Paths Between All Pairs of Nodes.....	77

3.4	Mathematical Programming Applications in Traffic and Transportation.....	81
3.4.1	Linear Programming in Traffic and Transportation	82
3.4.2	Integer Programming.....	88
3.4.3	Dimensionality of the Traffic and Transportation Engineering Problems	91
3.4.4	Complexity of Algorithms	92
3.5	Probability Theory and Traffic Phenomena	93
3.5.1	Probability Theory Basics	94
3.5.2	Random Variables and Probability Distributions	96
3.6	Queueing in Transportation Systems	106
3.6.1	Elements of Queueing Systems.....	107
3.6.2	$D/D/1$ Queueing.....	109
3.6.3	Little's Law	109
3.6.4	$M/M/1$ Queueing.....	114
3.6.5	$M/M/s$ Queueing	115
3.6.6	Queueing Theory and Investments in Transportation Facilities Expansion	119
3.7	Simulation.....	121
3.7.1	The Monte Carlo Simulation Method.....	121
3.8	MultiAttribute Decision Making Methods.....	124
3.8.1	Attribute Weights	125
3.8.2	Minimax Method	126
3.8.3	Maximax Method	127
3.8.4	Simple Additive Weighting Method.....	127
3.8.5	TOPSIS	128
3.9	Data Envelopment Analysis (DEA).....	130
3.9.1	Ratios	130
3.9.2	DEA Basics	132
3.10	Computational Intelligence Techniques.....	135
3.10.1	The Concept of Fuzzy Sets	136
3.10.2	The Fuzzy Sets Basics.....	138
3.10.3	Basic Elements of Fuzzy Systems	140
3.10.4	Artificial Neural Networks.....	149
3.11	Problems	155
	References	160
CHAPTER 4	Traffic Flow Theory	163
4.1	Traffic Flow Phenomenon.....	163
4.2	Measurements of the Basic Flow Variables	164
4.3	Vehicle Headways and Flow.....	165

4.4	Poisson Distribution of the Number of Arrivals and the Exponential Distribution of Headways.....	166
4.5	Normal Distribution and Pearson Type III Distribution of Headway.....	168
4.5.1	Speeds.....	169
4.6	Speed-Density Relationship.....	171
4.7	Flow-Density Relationship.....	173
4.8	Speed-Flow Relationship.....	175
4.9	Fundamental Diagram of Traffic Flow.....	182
4.10	Shock Waves.....	182
4.11	Micro-Simulation Traffic Models.....	186
4.12	Car Following Models.....	187
4.12.1	The Car-Following Model Based on Fuzzy Inference Rules.....	188
4.13	Network Flow Diagram.....	189
4.13.1	Link-Based Measurements.....	190
4.13.2	Generalized Traffic Flow Variables.....	190
4.13.3	Trajectory-Based Measurements.....	192
4.14	Problems.....	193
	References.....	195
CHAPTER 5	Capacity and Level of Service.....	197
5.1	Introduction.....	197
5.2	Highway Capacity and Level of Service.....	198
5.2.1	Highway Capacity and Traffic Demand Variations.....	199
5.2.2	Freeways.....	201
5.2.3	Methodology for the Capacity Analysis, LOS, and the Lane Requirements.....	205
5.2.4	The Number of Lanes Required to Deliver the Target LOS.....	209
5.3	“Ultimate” and “Practical” Capacity of Bus Stations.....	212
5.4	Rail Inter-Urban Transport Systems.....	215
5.4.1	General.....	215
5.5	Inland Waterway Freight/Cargo Transportation System.....	236
5.5.1	General.....	236
5.5.2	Classification.....	237
5.5.3	Infrastructure Network.....	239
5.5.4	Transport Service Network.....	250
5.6	Maritime Freight/Cargo Transport System.....	253
5.6.1	General.....	253
5.6.2	Ports.....	253
5.6.3	Shipping Lines.....	263
5.7	Air Transport System.....	269
5.7.1	General.....	269

5.7.2	Airports	269
5.7.3	Air Traffic Control	282
5.8	Problems	287
	References	290
	Websites.....	292
CHAPTER 6	Traffic Control	293
6.1	Introduction	293
6.2	Traffic Control at Signalized Intersections.....	294
6.2.1	Fixed-Time Control at the Isolated Intersection.....	296
6.2.2	Vehicle Delays at Signalized Intersections.....	300
6.2.3	The Determination of Timing for Fixed-Time Signals	307
6.2.4	Signal Phasing Selection	307
6.2.5	Volume Adjustment (Calculation of Equivalent Straight-Through Passenger Cars)	309
6.2.6	Critical Lane Volumes Selection	310
6.2.7	Change Interval Calculation.....	311
6.2.8	Cycle Length Calculation.....	312
6.2.9	Green Time Allocation.....	314
6.2.10	Pedestrian Crossing Time Check	315
6.2.11	Actuated Signal Control.....	316
6.3	Alternative Intersections.....	317
6.3.1	Displaced Left-Turn (DLT) Intersections.....	319
6.3.2	Median U-Turn (MUT) Intersection	323
6.3.3	Restricted Crossing U-Turn (RCUT) Intersections	324
6.3.4	Quadrant Roadway Intersection.....	326
6.3.5	Roundabout.....	327
6.3.6	Diverging Diamond Interchange (DDI)	331
6.4	Traffic Control for Arterial Streets	335
6.4.1	Adaptive Control Strategies	337
6.5	Area-Wide Traffic Control Systems	338
6.6	Traffic Control Signal Needs Studies	341
6.6.1	Warrant 1	342
6.6.2	Warrant 2	342
6.6.3	Warrant 3	342
6.6.4	Warrant 4	342
6.6.5	Warrant 5	342
6.6.6	Warrant 6	342
6.6.7	Warrant 7	342
6.6.8	Warrant 8	343
6.6.9	Warrant 9	343

6.7	Intelligent Transportation Systems	343
6.7.1	ITS Architecture	344
6.7.2	ITS User Services	345
6.7.3	Autonomous Vehicles	347
6.7.4	Autonomous Intersection Management	348
6.8	Freeway Traffic Control	350
6.8.1	Freeway Traffic Control Measures	350
6.8.2	Ramp Metering	351
6.8.3	Driver Information and Guidance Systems	354
6.9	Transportation Demand Management	355
6.9.1	Ride-Sharing (Carpooling)	356
6.9.2	Remote Parking and Park and Ride	357
6.9.3	Improved Walkability	357
6.9.4	Telework	357
6.9.5	Congestion Pricing	357
6.9.6	Congestion Charges	359
6.10	HOV Facilities	362
6.11	Highway Space Inventory Control System	363
6.12	Auctions	364
6.13	Rail Traffic Control	364
6.13.1	Background	364
6.13.2	Infrastructure	365
6.13.3	Supportive Facilities and Equipment	365
6.13.4	The Workload and Capacity of Train Dispatcher(s)	377
6.14	Air Traffic Control	381
6.14.1	Background	381
6.14.2	Infrastructure	381
6.14.3	Supportive Facilities and Equipment	387
6.14.4	The ATC Separation Rules and Procedures	389
6.14.5	The ATC Staff—Controller and Pilots	390
6.14.6	Automation	392
6.14.7	The Workload and Capacity of ATC Controller(s)	395
6.15	Problems	398
	References	399
	Websites	403
CHAPTER 7	Public Transportation Systems	405
7.1	Introduction	405
7.2	Number of Transported Passengers Versus Number of Served Vehicles	406
7.3	Urban Public Transit	408
7.3.1	Road-Based Urban Transit Systems	411

7.3.2	Rail-Based Urban Transit Systems	413
7.3.3	Complementarity of the Systems	416
7.4	Infrastructure of Urban Transit Systems.....	416
7.4.1	Stops/Stations in Urban Transit Systems.....	417
7.4.2	Urban Transit Systems Links and Indicators of Network Size.....	419
7.5	Public Transportation Availability.....	423
7.6	Passenger Flows in Public Transportation.....	424
7.7	Passenger Flows Along a Transit Line	426
7.8	Service Frequency and Headways	428
7.8.1	The Maximum Service Frequency	429
7.8.2	Passenger Waiting Time	430
7.8.3	Headway Determination by “Square Root Formula”	430
7.8.4	Headway Determination by Maximum Load Method.....	433
7.9	Timetable	433
7.10	Transit Line Capacity.....	435
7.10.1	Transit Line Capacity Utilization	437
7.11	The Performances of the Urban Transit Network	440
7.12	Public Transit Network Types	446
7.13	The Public Transit Network Design	449
7.13.1	Simple Greedy Algorithm for Public Transit Network Design	452
7.14	Service Frequencies Determination in Transit Network.....	456
7.15	Vehicle Scheduling in Public Transit	460
7.16	Crew Scheduling in Public Transit	462
7.17	Disruption Management in Public Transit.....	463
7.18	Public Transit Planning Process.....	466
7.19	Shared Mobility	466
7.19.1	Demand-Responsive Transportation Systems.....	468
7.19.2	Type of Routing and Scheduling in DRT.....	468
7.19.3	Dial-a-Ride	469
7.19.4	Bicycle Transportation	473
7.19.5	Transportation Policy That Promotes Bicycle Transportation	473
7.19.6	Infrastructure for Bicycling.....	475
7.19.7	Bicycle-Sharing Systems.....	479
7.19.8	Imbalance Between Bike Demand and Bike Supply	480
7.20	Interurban Road Transport Systems.....	482
7.20.1	Introduction	482
7.20.2	Service Networks in an Interurban Road Transportation.....	482
7.21	Air Transportation	486
7.21.1	Air Transportation Demand	487
7.21.2	Airline Supply and Airline Capacity	488
7.22	Air Transportation Networks	493

7.23	Flight Frequencies	498
7.23.1	Flight Frequency Satisfying Demand	500
7.23.2	Flight Frequency Gaining Market Share	500
7.23.3	Flight Frequency Minimizing the Total Route Cost	502
7.24	Airline Transport Work and Productivity	504
7.25	Fleet Size	507
7.26	Level of Service	508
7.27	Airline Scheduling	510
7.28	Airline Schedule Planning Process	512
7.29	Airline Revenue Management	515
7.30	Problems	517
	References	519
CHAPTER 8	Transportation Demand Analysis	523
8.1	Introduction	523
8.2	Transportation Demand and Transportation Supply	524
8.3	Transportation Demand Modeling	525
8.4	Transportation Demand Forecasting Techniques	527
8.4.1	Time Series Models	529
8.4.2	Trend Projection	532
8.5	Four-Step Planning Procedure	537
8.5.1	Trip Generation	539
8.5.2	Trip Distribution	541
8.5.3	Gravity Model	542
8.5.4	Modal Split	546
8.5.5	Route Choice and Traffic Assignment	549
8.6	User Equilibrium and System Optimum	551
8.6.1	Formulation of the User Equilibrium Problem	555
8.7	Heuristic Algorithms for Finding User-Equilibrium Flow Pattern	562
8.7.1	Capacity Restraint Algorithm	562
8.7.2	FHWA Algorithm	564
8.7.3	Incremental Assignment Algorithm	565
8.8	System Optimal Route Choice	568
8.9	Price of Anarchy	570
8.10	Braess Paradox and Transportation Capacity Expansions	571
8.11	Dynamic Traffic Assignment	574
8.12	Transportation Demand Analysis Based on Discrete Choice Models	575
8.13	Logit Model	577
8.13.1	Independence of Irrelevant Alternatives Property	581
8.13.2	Logit Model Estimation	582

8.14	Application of the Computational Intelligence Techniques for the Prediction of Travel Demand	585
8.15	Activity-Based Travel Demand Models	587
8.15.1	Basic Characteristics of the Activity-Based Travel Models	588
8.16	Problems	591
	References	593
CHAPTER 9	Freight Transportation and Logistics	597
9.1	Logistics Systems Basics	597
9.1.1	Reverse Logistics	600
9.2	Road Freight Transport Infrastructure	601
9.2.1	“Ultimate” and “Practical” Capacity and Service Level of Road Truck Roads	602
9.2.2	“Ultimate” and “Practical” Capacity of Road Freight Terminals and Their Level-of-Service	603
9.3	Service Networks of the Road Freight Transport Operators	605
9.3.1	Capacities and Service Level of the Road Freight Transport Service Networks	605
9.4	City Logistics	609
9.4.1	Urban Freight Transport Basics	610
9.4.2	Urban Freight Distribution Systems	612
9.5	Basics of Location Theory	623
9.5.1	Location Problems Classification	624
9.5.2	Measuring Distances Between Facilities and Demand-Generating Nodes	625
9.5.3	The Location Set Covering Problem	626
9.5.4	Maximal Covering Location Problem	631
9.5.5	Medians	632
9.5.6	Hub Location	638
9.6	Vehicle Routing and Scheduling	639
9.6.1	VRPs Types	640
9.6.2	Vehicle Routing and Scheduling Problems Complexity	642
9.6.3	Traveling Salesman Problem	642
9.6.4	Vehicle Routing Problem	644
9.6.5	Clark-Wright’s “Savings” Algorithm for the VRP	646
9.6.6	Sweep Algorithm for the VRP	652
9.7	Problems	658
	References	660
	Website	662

CHAPTER 10	Transport Economics	663
10.1	Introduction	663
10.2	Definition of the Main Terms	665
10.2.1	Transport Sector/Industry	665
10.2.2	Fixed and Variable Costs	665
10.2.3	Economies of Scale and Economies of Scope	666
10.2.4	The Cost Function and Revenues	667
10.2.5	Relationship Between Demand and Supply	670
10.3	Transportation Projects Evaluation	671
10.4	Cost-Benefit Analysis.....	672
10.5	Infrastructure Cost.....	675
10.5.1	Urban Mass Transit Systems.....	675
10.5.2	Road.....	681
10.5.3	Rail.....	682
10.5.4	Inland Waterways.....	683
10.5.5	Ports	685
10.5.6	Airports.....	687
10.6	Operating Costs and Revenues	688
10.6.1	Individual Cars	688
10.6.2	Urban Mass Transit Systems.....	691
10.6.3	Interurban Mass Transit Systems.....	699
10.6.4	Inland Waterways Cargo Transport	709
10.6.5	Maritime Cargo Transport.....	712
10.6.6	Air	723
10.6.7	Intermodal—Rail/Road Freight Transport.....	734
	References	742
	Websites.....	745
CHAPTER 11	Transportation, Environment, and Society	747
11.1	Introduction	747
11.2	Categorization and Modeling Impacts	748
11.2.1	Congestion	748
11.2.2	Noise	749
11.2.3	Traffic Incidents/Accidents (Safety).....	751
11.2.4	Energy/Fuel Consumption and Emissions of GHG.....	752
11.2.5	Land Use.....	760
11.2.6	Waste	761
11.3	Road-Based Systems	761
11.3.1	Congestion	761
11.3.2	Noise	765
11.3.3	Traffic Accidents/Incidents (Safety).....	772

11.3.4	Energy/Fuel Consumption and Emissions of GHG.....	776
11.3.5	Land Use.....	788
11.4	Rail-Based Systems.....	790
11.4.1	Congestion.....	790
11.4.2	Noise.....	791
11.4.3	Traffic Accidents/Incidents (Safety).....	798
11.4.4	Energy/Fuel Consumption and Emissions of GHG.....	808
11.4.5	Land Use.....	817
11.5	Water-Based Systems.....	819
11.5.1	Congestion.....	819
11.5.2	Noise.....	820
11.5.3	Traffic Accidents/Incidents (Safety).....	821
11.5.4	Energy/Fuel Consumption and Emissions of GHG.....	825
11.5.5	Land Use.....	840
11.5.6	Waste.....	842
11.6	Air-Based Systems.....	844
11.6.1	Congestion.....	844
11.6.2	Noise.....	848
11.6.3	Traffic Accidents and Incidents (Safety).....	854
11.6.4	Energy/Fuel Consumption and Emissions of GHG.....	857
11.6.5	Land Use.....	865
11.7	Costs of Impacts—Externalities.....	868
11.7.1	Definition.....	868
11.7.2	Some Modeling.....	870
11.7.3	Some Estimation/Quantification.....	876
	References.....	879
	Website.....	885
CHAPTER 12	Resilience of Transport Systems.....	887
12.1	Introduction.....	887
12.2	Reliability, Resilience, Robustness, and Vulnerability of Engineering Systems.....	888
12.2.1	Concept and Definition.....	888
12.2.2	Uncertainty.....	891
12.3	Reliability, Resilience, Robustness, and Vulnerability of Transport Systems.....	891
12.3.1	Concept and Definition.....	891
12.3.2	Disruptive Events.....	896
12.4	Indicators of Performances for Estimating Reliability, Resilience, Robustness, and Vulnerability.....	904
12.4.1	Scope.....	904
12.4.2	Models of Indicators.....	905

12.5	Examples of Estimating Reliability, Resilience, Robustness, and Vulnerability	916
12.5.1	Road Transport Mode	916
12.5.2	Rail Transport Mode	923
12.5.3	Air Transport Mode	931
12.6	Contingency Measures and Disruption Management	939
12.6.1	Public Transport	939
12.6.2	Evacuation Problems	940
12.6.3	Evacuation Process	941
12.6.4	k -Shortest Paths Concept in Evacuation	941
12.6.5	Evacuees' Departure Rate and Departure Times	943
12.6.6	Evacuation Strategies	944
12.6.7	The Performance Metrics	944
12.7	Comparing Reliability, Resilience, Robustness, Vulnerability, and Sustainability of Transport Systems	945
12.7.1	Similarity and Differences	945
12.7.2	Possibility for Common Approach	948
12.7.3	Examples of Common Approach	951
12.8	Problems	959
	References	959
	Websites	963
	Index	965
