Area of research

Main area of research is development of the seaports and other transport systems based on the theoretical and empirical model of public private partnership as a part of strategic decision-making management related to project and investment activities. She deals with the improvement of the organization, technological processes and management of seaports and maritime organizations and transport logistics systems through application of systematic-analytical and holistic approach in problem research, scientific and research methodology, use of econometric and quantitative methodology for economic optimization, applicability of statistical methods and other analysis techniques used in data analysis, solving practical problems.
